

ISO 3834 Certification for Welding Quality

According to the Ministerial Decree of 14 January 2008 (NTC08), the **EN ISO 3834** standard is mandatory for all metal carpentry workshops that perform welding operations on structural elements.

Given the new European regulatory standards that require the **CE marking** for metallic structural components according to **EN 1090-1**, compliance with ISO 3834 requirements – already widely applied in the construction of machines, pressure equipment and plants – has become a preliminary, mandatory requirement for all companies that produce structural components with welded joints.
